2

Which of the following apparatus is most suitable to measure exactly 25.40 cm<sup>3</sup> of aqueous sodium hydroxide into a beaker?

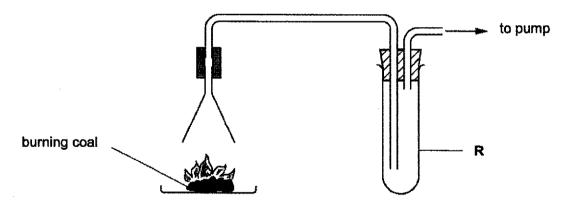

22 Mercury is a liquid at 25 °C.

What is the melting point and the boiling point for mercury?

|   | melting point/ °C | boiling point/°C |
|---|-------------------|------------------|
| Α | 45                | 108              |
| В | - 5               | - 90             |
| С | - 89              | - 4              |
| D | -39               | 357              |

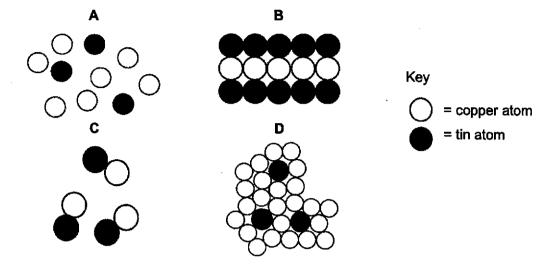

23 The diagram shows the apparatus used to test for the gases produced by burning coal.

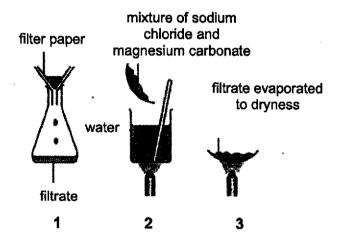

Which reagent should be placed in test tube R to show that sulfur dioxide is formed?

- A aqueous potassium iodide
- B acidified potassium manganate(VII)
- C aqueous calcium hydroxide
- D aqueous sodium hydroxide

24 Which diagram best shows the arrangement of atoms in bronze at room temperature?

25 A solid mixture of sodium chloride and magnesium carbonate is separated using the steps shown below.

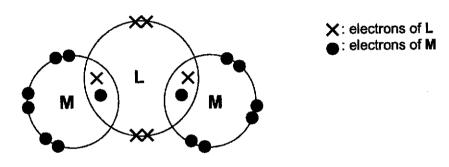

In which order should the steps be carried out to separate the two chemicals?

- A  $2 \rightarrow 1 \rightarrow 3$
- $B \quad 1 \rightarrow 2 \rightarrow 3$
- C  $3 \rightarrow 1 \rightarrow 2$
- D  $2 \rightarrow 3 \rightarrow 1$

Two naturally occurring isotopes of uranium can be represented as  $^{235}_{92}$  U and  $^{238}_{92}$  U.

Which of the following statements is correct?

- A They have the same number of electrons and protons.
- **B** They have the same number of neutrons and protons.
- C They have the same number of neutrons and electrons
- **D** They have the same number of nucleons and electrons.
- 27 The diagram shows the arrangement of electrons in the valence shell of the atoms in the compound LM<sub>2</sub>.

Which of the following pairs of elements could L and M be?

|   | L        | М        |
|---|----------|----------|
| A | carbon   | fluorine |
| В | fluorine | sulfur   |
| С | sulfur   | hydrogen |
| D | oxygen   | chlorine |

28 Metal P and non-metal Q react together to form an ionic compound P<sub>3</sub>Q<sub>2</sub>.

Which of the following correctly describes the electrons gained and lost by each atom?

|   | electrons lost by each atom of P | electrons gained by each atom of Q |
|---|----------------------------------|------------------------------------|
| A | 1 .                              | 3                                  |
| В | 2                                | 3                                  |
| С | 3                                | 2                                  |
| D | 2                                | 1                                  |

29 Sodium, aluminium and sulfur are in the same period of the Periodic Table.

Which trend in types of oxides occur across this period?

|   | left       | <del></del> | right      |
|---|------------|-------------|------------|
| Α | acidic     | amphoteric  | basic      |
| В | amphoteric | basic       | acidic     |
| С | basic      | amphoteric  | acidic     |
| D | basic      | acidic      | amphoteric |

30 Four aqueous solutions, J, K, L and M have the pH values as shown in the table.

| solution | J | K | L | М  |
|----------|---|---|---|----|
| pН       | 2 | 6 | 8 | 10 |

Which pair produces an alkaline solution when mixed?

- A J and K
- B J and M
- C K and L
- D L and M
- 31 Which of the following salts can be prepared using titration?
  - A potassium chloride

B copper (II) chloride

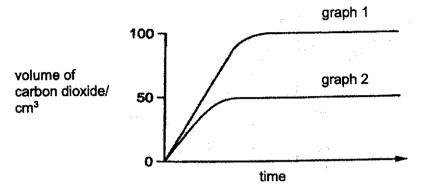

c calcium sulfate

D silver nitrate

32 Some crystals of zinc carbonate were added to an excess of sulfuric acid at room temperature.

The volume of carbon dioxide produced was measured over a period of time. The results are shown in graph 1.

The experiment was repeated and graph 2 was obtained.

Which change was used to obtain the results shown in graph 2?

- A Acid of the same volume and half the original concentration was used.
- B Larger pieces of zinc carbonate was used in the reaction.
- C The mass of zinc carbonate used was decreased by half.
- D A lower temperature was used.
- 33 Element G can form an ion G<sup>+</sup> which has an electronic structure of 2,8,8.

Which of the following statements about element G are correct?

- I G can be cut with a knife.
- II G is a strong oxidising agent.
- III G is in Period 4 of the Periodic Table.
- IV G reacts with cold water.
- A I and II only

B | and ||| only

c I, III and IV only

**D** II, III and IV only

34 The results of three halogen displacement experiments are shown in the table.

| experiment | halogen        |                | halide solution          |              |
|------------|----------------|----------------|--------------------------|--------------|
| experiment | added          | Q <sup>-</sup> | R-                       | s-           |
| 1          | Q <sub>2</sub> | -              | R₂ displaced             | S₂ displaced |
| . 2        | R <sub>2</sub> | no reaction    | -                        | no reaction  |
| 3          | S2             | no reaction    | R <sub>2</sub> displaced | -            |

Which row correctly shows the identity of halogens Q, R and S?

|   | Q  | R    | S  |
|---|----|------|----|
| A | CI | l    | Br |
| В | CI | Br   | l  |
| С | Br | · C/ | l  |
| D | l  | Br   | CI |

35 Steel is an alloy of iron and carbon.

Which of the following statements is correct?

- A Steel cannot conduct electricity.
- B The iron in steel can react with hydrochloric acid.
- C Steel can be represented with a chemical formula.
- D Steel is formed by a chemical reaction between iron and carbon.

36 The table shows some reactions of metals P, Q, R and S.

| metal | action of hydrochloric acid on metal    | action of carbon on<br>heated metal oxide | action of hydrogen gas<br>on heated metal oxide |
|-------|---|---|---|
| P     | a lot of effervescence seen immediately | reduced                                   | not reduced                                     |
| Q     | a lot of effervescence seen immediately | not reduced                               | not reduced                                     |
| R     | some effervescence after a long time    | reduced                                   | reduced   |
| S     | no reaction                             | reduced                                   | reduced   |

What is the order of reactivity for metals P, Q, R and S?

| least reactive – |             | -           | most reactive     |
|------------------|-------------|-------------|-------------------|
| Р                | Q           | R           | S                 |
| Q                | Р           | R           | S                 |
| S                | R           | Р           | Q                 |
| S                | R           | Q           | P                 |
|                  | P<br>Q<br>S | P Q Q P S R | P Q R Q P R S R P |

37 The following passage describes some reactions that take place during the extraction of iron in the blast furnace.

"An ore of iron, W, is mixed with coke and limestone, and added into a blast furnace.

Hot **X** is blasted in through a ring of pipes from the bottom of the furnace.

The coke burns, producing gas Y, which is reduced by reaction with more coke to give gas Z. Gas Z then reduces the iron ore to iron."

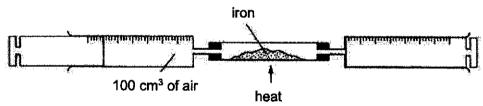

Which row correctly shows the identity of substances W, X, Y and Z?

|   | W         | X               | Y               | Z               |
|---|-----------|-----------------|-----------------|-----------------|
| A | haematite | air             | carbon monoxide | carbon dioxide  |
| В | haematite | air             | carbon dioxide  | carbon monoxide |
| С | carbon    | carbon monoxide | carbon dioxide  | oxygen          |
| D | carbon    | carbon monoxide | oxygen          | carbon dioxide  |

- 38 Which statement is not a reason for recycling copper?
  - A Recycling decreases the energy requirement to obtain metals.
  - B Recycling decreases the environmental damage due to mining.
  - C Recycling decreases the amount of natural resources available.
  - D Recycling decreases the amount of scrap metal accumulating in the environment.
- 39 The reaction between iron (III) ions and calcium metal is represented by the equation.

Which statement is correct?

- A Fe<sup>3+</sup> ions are oxidised by loss of electrons.
- **B** Fe<sup>3+</sup> ions are reduced by gain of electrons.
- C Calcium metal is reduced by loss of electrons.
- D Calcium metal is oxidised by gain of electrons.
- A 100 cm<sup>3</sup> sample of air is trapped in a syringe. The air is slowly passed over heated iron in a tube until there is no further decrease in volume.

When cooled to the original temperature, what is the volume of gas that remains in the syringe?

- **A** 1 cm<sup>3</sup>
- B 21 cm<sup>3</sup>
- C 78 cm<sup>3</sup>
- D 100 cm<sup>3</sup>

#### **READ THESE INSTRUCTIONS FIRST**

- 1. Write your name, class and register number on the Question paper.
- 2. This paper consists of 2 sections:

Section A [45 marks]

Answer ALL questions in the spaces provided on pages 2 to 8.

Section B [20 marks]

Answer ALL questions in the spaces provided on pages 9 to 11.

- 3. The use of a calculator is allowed.
- 4. A copy of the colours of common metal hydroxides is given on page 12.
- 5. A copy of the Periodic Table is given on page 13.

6. The number of marks is given in brackets [ ] at the end of each question or part question.

| Section   | Marks |
|-----------|-------|
| Section A | 45    |
| Section B | 20    |
| Total     | 65    |

This question paper consists of 13 printed pages including the cover page.

#### Section A [45 marks]

Answer all questions in the spaces provided.

1 Fig. 1.1 shows a few types of reactions.

|       | displace the less reactive metal from its metal ore.                                  |                 |
|       |   |                 |
| 7a    | Coal contains <u>sulfur</u> as an impurity, hence when coal is burnt, <u>sulfur</u>   | 1               |
|       | <u>reacts with oxygen</u> to form sulfur dioxide.                                     |                 |
|       | Also accept: Volcanic eruptions   |                 |
| 7bi   | Add slaked lime / calcium hydroxide to neutralize the acidic soil/                    | 1               |
|       | neutralize acid in soil;  |                 |
|       |   |                 |
|       | pH of soil increases  | 1               |
| İ     |   |                 |
|       | Also accept: <u>quicklime / calcium oxide.</u>  |                 |
| 7bii  | Corrodes marble/limestone bulldings   | Any 1 - 1       |
|       |   |                 |
|       | <u>OR</u>   |                 |
|       |   |                 |
|       | Lakes become acidic, killing the fishes/marine life                                   |                 |
| 7c    | Carbon monoxide is poisonous/toxic;   | 1               |
|       |   |                 |
|       | reacts with haemoglobin in the blood to form carboxyhaemoglobin, a                    | 1               |
|       | stable compound which reduces the ability of blood to carry oxygen.                   |                 |
|       |   | <u> </u>        |
| 0-1   | Iron (II) carbonate   | 1               |
| 8ai   |   | 1               |
| 8aii  | Iron (II) chloride  | 1               |
| 8aiii | Silver chloride   | 1               |
| 8aiv  | Iron (II) hydroxide   | 1               |
| 8av   | Hydrochloric acid   | corr. chemical  |
| 8b    | FeCO <sub>3</sub> → FeO + CO <sub>2</sub> /   | formulas – 1M   |
|       | FeO + 2HCl → FeCl <sub>2</sub> + H <sub>2</sub> O /                                   | Balanced – 1M   |
|       | $FeCl2 + 2AgNO3 \rightarrow Fe(NO3)2 + 2AgCl /$                                       | Dalaillocu IIVI |
|       | FeCl <sub>2</sub> + 2NaOH → 2NaCl + Fe(OH) <sub>2</sub>                               |                 |
|       | 0.701   |                 |
|       | Ca(OH) <sub>2</sub> + CO <sub>2</sub> → CaCO <sub>3</sub> + H <sub>2</sub> O          |                 |

## Section B (20 M)

| Qn.<br>No | Answer   | Marks                |
|-----------|--|----------------------|
| 9ai       | - volume of hydrogen gas produced over fixed intervals of time / mass of                                   | 1                    |
|           | reaction mixture over fixed intervals of time  |                      |
|           | - <u>time taken</u> for the reaction to complete   | 1                    |
| 9aii      | volume of gas produced method:   | 1 – corr             |

|           | OR   |                      |

|        | mass of reaction mixture method:   |         |
|--------|--|---------|
|        | p wass of reaction mixture of  |         |
|        | Graph & Street min   |         |
| 9c     | Speed of reaction increases / is higher;   | 3c – 2M |
|        |  | 1 2c    |
|        | Because <u>concentration</u> of hydrochloric acid <u>increases / is higher</u> , therefore there are <u>more reactant particles per unit volume</u> ;  | 1M      |
|        | And thus there is a <u>higher rate of collision and effective collisions</u> between reactant particles.   |         |
| 9d     | Reaction is exothermic/reaction produce heat/gives out heat.   | 1       |
| _      |  |         |
| 10ai   | Moving from sodium to element with proton number 18 (argon), the atoms change from losing electrons to gaining electrons to achieve the stable noble gas electronic configuration.   | 1       |
| 10aii  | Both have 3 electron shells.   | 1       |
| 10aiii | The element with proton number 18 is chemically inert/ unreactive and potassium is reactive.   | 1       |
|        | This is because the element with proton number 18 has an electronic structure of <u>2.8.8</u> , hence it has a <u>completely filled valence shell</u> . It <u>does not need to lose, gain or share electrons</u> with other elements.    | 1       |
|        | However, sodium has an electronic structure of 2.8.1/1 valence electron and it needs to lose 1 electron to achieve a stable electronic configuration of noble gas./need to lose 1 electron to achieve a completely filled valence shell. | 1       |
|        | 1m for e.c of both elements.   |         |
|        | 1m for discussing how argon has a completely filled shell.   |         |
| 15.    | 1m for discussing how sodium needs to lose 1 electron.   | 1       |
| 10bi   | Zinc does not react with cold water but reacts with steam;   | i       |
|        | Magnesium <u>reacts</u> (slowly) <u>with cold water</u> ;  | 1       |
|        | As zinc requires a higher temperature to react with water compared to magnesium; therefore magnesium is above zinc / zinc is below   |         |

| 10bii | In brass, the atoms are of different sizes.   | 3c – 2m           |
|-------|---|-------------------|
|       | This disrupts the orderly arrangement of the zinc/pure metal atoms                            | 2c 1m<br>0-1c -0m |
|       | and it is difficult for the layers of atoms to slide over each other when a force is applied. |                   |
|       | This makes brass harder than pure zinc and pure copper.                                       |                   |
